Study on Rad51 overexpression on rectal cancer [Retraction]

Qiu PN, Ju HX, Li DC, Fan YT, Chen YB. *International Journal of Clinical and Experimental Pathology*. 2016;9:10444-10450.

We have found a mistake in the data of the overall survival (**Figure 3**). Our teammates have divided some patients with Rad51 low expression into the high one by mistake due to the miscommunication of our message. When we

analyzed data again, we found the result of the survival of two groups in 2, 3 and 5 years showed no statistically significant, which resulted in the fact that the expression of Rad51 showed no correlation with prognosis, making our conclusion was not convincing. So we all authors want to retract this article.
